

A LIFETIME OF CANINE WELLNESS

Commitment

A dog can provide you and your family members a lifetime of unconditional love. Because dogs can live 10-15 years, your decision to own one should be taken seriously. Once you have purchased or adopted a dog, being a responsible pet owner becomes a lifelong commitment.

Responsibility

Owning a dog can be a wonderful experience that brings many rewards. There are also many responsibilities. Dogs must be properly cared for and protected for their entire life. That's your responsibility.

Maintaining Good Health

Your dog will need to have routine veterinary care, a nutritious diet, regular exercise and lots of love. Although none of us like to think about bad things happening, it's still very important to remember that veterinary attention will also be necessary in the event of any unforeseen emergencies.

A Lifetime of Veterinary Care

Unfortunately, dogs can't talk, which means you are your dog's ambassador and advocate. The relationship you develop with your veterinarian is very important as he or she is the best source of information regarding pet care. Our professional veterinary staff will monitor your dog's health through all stages of life and make adjustments as needed. Together, we can provide a healthy, happy and long life for your dog!

The schedule provided here is a guideline of routine health care. A specific health care program will be designed for your dog based on a risk assessment developed by you and your veterinarian.

6-9 weeks

- ✓ Comprehensive Initial Physical Examination
- ✓ Weight & Body Condition
- ✓ Qualitative Ova & Parasite Analysis
- ✓ Strategic De-worming
